Harvey, IL - May 16, 2014 - Sixty years and going strong, Power-Strut has established a premium position in the electrical industry. The company was started in 1954 and has grown nationally supporting electrical raceway applications with a complete line of metal framing channel and fittings.

The Power-Strut metal framing system is often regarded as a basic building material. Power-Strut is widely used by electrical contractors to support conduit, panel boxes, raceway systems, lighting support systems and other electrical components. The line contains over 8,000 products and a wide range of finishes and materials.

Power-Strut is proud of the exacting standards of research, design; engineering and manufacturing that go into production of the Power-Strut system. For more information on Power-Strut and its products visit <http://www.power-strut.com>.
